## CYLINDRICAL BOILERS

### Steam, hot water and heat recovery steam generators

Standard Fasel is the designated party for supplying and commissioning of cylindrical boilers. Whether this concerns an entirely new boiler house with the corresponding complete boiler house equipment or the replacement of the boiler only or other parts is irrelevant.

Standard Fasel has supplied and commissioned more than 1000 units, which bears witness to our comprehensive expertise in the field of boiler units/installations.

We have the know-how and manpower to design, deliver, assemble and commission the boiler plant which is most suitable in your specific case. The boiler plant will be manufactured in full agreement with your demands.

However we also assist you in making the best choices in order to achieve an optimum price/quality ratio.

New boiler houses can be designed by us with optimum layout and most suitable equipment and instruments; existing boiler houses can be optimised. We will provide expert advice about the need for or benefits of:

- De-aerators
- RO-units (reverse osmosis)
- Water softeners
- Chemical dosing units
- Economisers
- Air to Air preheaters
- Flue gas condensers
- Connecting piping and appendages
- The electro-technical installation

All facets of the work, e.g. engineering, planning, delivery, assembly and commissioning are executed by our own people: a concentration of experience and knowledge under one single roof. The project manager is in charge of the projects, he is also your contact person, who will clearly and swiftly deal with any questions or problems you may have.

We are fully capable of managing the entire project from start to finish, but, if requested by you, we are also prepared to execute a specific part of the project only.

Our cylindrical boiler concept product range comprises:

Steam boilers	from 250 kg/h	to 70 ton/h
Hot-water boilers		up to 35 MW
Heat recovery steam generators behind turbines		available on request
Process boilers		available on request

The boiler can be combined with various burners. We have our own (TAS) burner, but can also fit other types of burners in your installation. The fuelling options are gas, oil or a combination. We also cater for options such as co-firing with biogas.
